An introduction

Chromogenex was established in 1986 and is now at the forefront of laser and light technology. In addition to the new Fusion 3D Lift, our product range includes:

Quality commitment

Our commitment to quality is paramount as we continue to research, develop and manufacture laser products that are distributed to more than 40 countries throughout the world. We are regulated by SGS UK Limited and hold ISO 13485/2003. Indeed, our quality system meets European Medical Device Directives, United States FDA cGMP and Canadian Medical Device Regulations.

For further information please visit www.chromogenex.com or call +44 (0)1554 755444.

Product range

i-lipo

The UK's first non invasive laser body shaping and fat reduction system.

nicolite

A low level laser therapy system for smoking cessation.

regenlite

A patented pulsed dye laser for acne, skin rejuvenation and vascular lesions.

phaserepl

An intense pulsed light system for hair removal, skin rejuvenation and vascular treatment.

chromogenex™

About the Fusion 3D Lift

Fusion 3D Lift is the first natural facelift giving instant results, without the need for needles.

An advanced system for non invasive facial rejuvenation, the Fusion 3D Lift is a real alternative to Botox and dermal fillers. Lines and wrinkles simply disappear as the technology achieves instant facelift and skin rejuvenation for a natural more youthful appearance.

Before

After

Completely safe and painless, the treatment takes just one hour. It is ideal as a one off treatment for a special occasion or as a course of treatments to restore the skins natural youthfulness and beauty.

Your clients will love Fusion 3D Lift - the results are instant and long-lasting without the need for needles or pain. In fact, they will see and feel the difference immediately as lines and wrinkles disappear while skin tone and elasticity are dramatically improved.

chromogenex™

The process

As the first system for non invasive facial rejuvenation that combines laser, acoustic wave and diamond technologies, Fusion 3D Lift is based on three simple steps:

1. Skin preparation

Our gentle yet powerful diamond tip exfoliator smooths the surface of the skin to remove dead skin cells and enhance penetration of topical infusion creams. This method of exfoliation increases the microcirculation, increasing oxygen and nutrient delivery to all layers of the skin, improving the skin environment and reducing the appearance of superficial pigmentation.

2. Infusion

Using the latest acoustic wave technology, our low frequency sonic head creates a three dimensional microscopic matrix of channels in the skin to allow deep penetration of hyaluronic acid (HA). This pure hyaluron gel has been formulated to allow maximum absorption when applied with acoustic wave energy - up to 800% greater absorption. Pure hyaluron has excellent water retention properties once infused in the 3D matrix so skin is hydrated and plumped. By infusing our pure hyaluron gel, the skin is replenished and restored to a more youthful appearance as lines and wrinkles simply disappear.

3. Activation and tightening

The final step is when infra red laser is applied to the skin to activate the hyaluron and tighten the skin. The result is a firmer skin texture and glowing complexion. The laser light is absorbed in the dermis and triggers production of collagen and elastin to provide long-term lifting and tightening of the skin. The procedure is completed with the application of Ultrox cream - a high potency peptide cream which mimics Botox and weakens the facial muscle to reduce frown lines.

How does Fusion 3D Lift work?

Fusion 3D Lift creates immediate and long-term improvements in the appearance of skin, reducing wrinkles and creating a tightening and lifting effect.

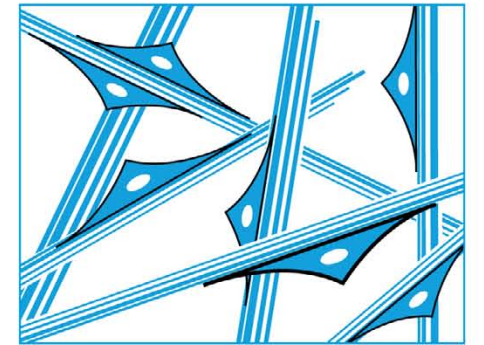

This is achieved with the introduction of HA into the dermis which provides an immediate plumping effect, increasing hydration and facilitating skin cell rejuvenation along with the promotion of increased oxygen and nutrient perfusion to ensure healthy cells. Longer term, new structural molecules are stimulated to repair the dermis damaged by natural ageing and UV exposure effects.

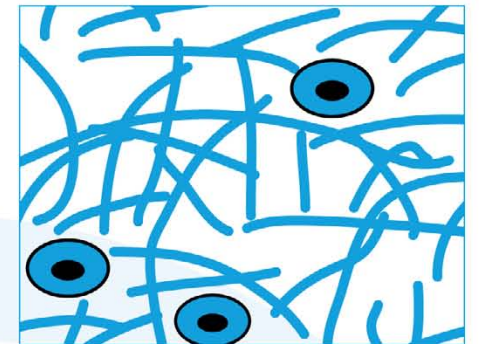

Normal constraints of non-invasive topical ingredient introduction through the skin is overcome by first reducing the outer layer of dead skin 'scales' to start the transport process and to reveal fresh, vibrant skin for immediate visual effects with diamond exfoliation.

Acoustic wave therapy is then used to 'push' the HA through the epidermis and a combination of exfoliation and heat induced vasodilatation increases oxygen and nutrient delivery to ensure maximum cell condition. This combination of exfoliation and acoustic wave therapy has been demonstrated to greatly enhance the penetration of topicals over the performance of the individual treatments alone.

Once in the dermis, the specifically formulated HA monomer units are activated to form coiled HA long chain units that promote water retention within the tissue providing an instant plumping and tightening effect by forming a 3D network. This 'space filling' action also provides a tension on the fibroblasts in the dermis, a force which stimulates them to begin production of brand new connective fibres. Wavelengths used in the hand-piece are also proven to stimulate cellular activity, increasing cell rejuvenation and the production of new collagen and elastin for long-term improvement.

Young (18-29 years)
Intact collagen> Mechanical stimulation on cells>
Procollagen synthesis- increasing

Old (80+years)
Disorganized collagen> Loss of mechanical stimulation>
Procollagen synthesis- decreasing

Our skincare products

Fusion 3D Lift is supported by anti-ageing skincare products that have been developed to support long term improvement in the elasticity and appearance of skin. Our Dermagenex range includes:

Glycolic cleanser

This intense Glycolic cleanser is for all skin types. The anti-ageing properties of green tea, aloe and alpha hydroxyl acids promote cell renewal and rejuvenation. With excellent exfoliation properties, the cleanser is formulated to remove dirt, oil, pollutants and make-up residue.

Hyaluronic replenish serum

The unique properties of Hyaluronic Acid make it one of the most vital components of good skin care. At Chromogenex, we use a purified pharmaceutical grade of hyaluronic acid to produce outstanding results, drawing moisture to replenish and nourish skin.

Ultrox cream

A lightweight cream, Ultrox relaxes the facial muscles, nourishes skin and moisturises while helping to make skin look healthier and younger. Daily application of Ultrox can dramatically reduce the appearance of fine lines and wrinkles while improving the firmness of skin.

Green tea SPF 30+

This anti-ageing aloe based moisturising formula includes lipoic acid and green tea extract. The product acts a broad spectrum UVA and UVB block with the latest nano and bio-technologies helping to deliver high UV protection while fine lines are reduced with wrinkle reducing peptides.

Fusion 3D Lift & your business

At Chromogenex, we actively support the marketing of the Fusion 3D Lift with support packages available to help ensure that you get the best return on your investment. Specifically, we offer:

- Branded promotional material including a demonstration DVD.
- Marketing brochures.
- Listings on our extensive website.
- Regular advertising and PR.

What's more, finance plans are available to ease the cost of purchase - just ask us about our affordable payment packages.

THE NO-NEEDLE FACELIFT: DIAMOND MICRODERMABRASION, ACOUSTIC WAVE THERAPY AND LASERS

Say hello to your super-facial. The triple therapy starts with microdermabrasion, then hydrating and softening hyaluronic acid penetrates your skin with the aid of acoustic waves, before finally an infra-red laser tightens your face. Relaxing and completely painless, these three treatments combine to make you look instantly less lined. Best of all, your skin improves for up to two months as new collagen is made.
